

Wrap Up: How do you see yourself in the future?

The Future of YOU.

What exciting thing did you learn today? Did you imagine yourself working with robots? Designing workstations? Writing computer code?

Draw yourself in a future career or draw your favorite thing you learned today.

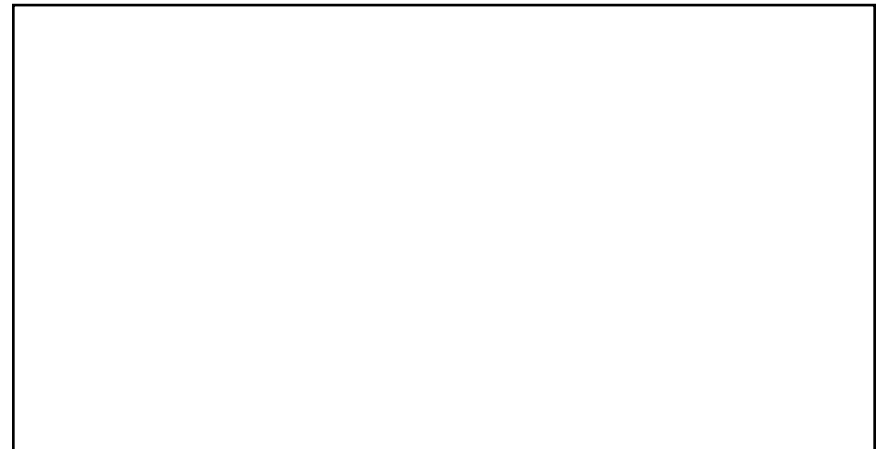

Amazon Video Tour Journal

Peek inside Amazon and see cool robots and computers helping people. Follow along and get hands-on with this Tour Journal.

Stop 1: Organize Things

Amazon **organizes** both things and information. It helps them get people the items they order.

How do you organize things? You might organize things based on size, color, or how often you use them. Write about or draw a way you organize things.

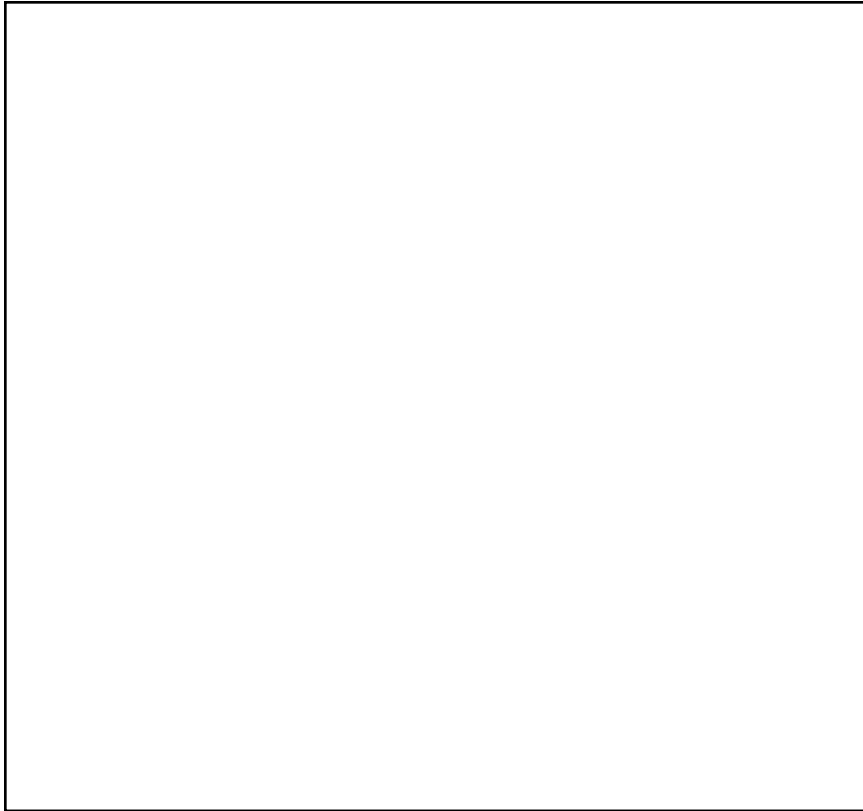

Fold here

Stop 2: Create Algorithms

Amazon's computers and robots use **algorithms** to get things done.

An algorithm is a list of steps to complete a task. Computers and robots can follow an algorithm written in a code. That's a language computers understand.

Write or draw the steps you follow to get ready for school or for bed here.

Stop 3: Design Your Dream Workstation

Amazon's **workstations** are specially designed. They help employees be efficient, safe, and comfortable while filling orders.

Imagine you can build your dream workstation for homework or doing a craft. What would you include to help you focus or to stay comfortable? How would your workstation help you be more efficient?

Step 4: Imagine a New Way to Deliver Packages

The last step in getting customers their products is **delivery**.

Can you imagine a robot bringing a package to you? Draw an electric delivery vehicle or robot here.
